Associate, LLM Post-Training at Ethara AI and AI & Data Science graduate (CGPA 8.63/10), with hands-on experience across LLM evaluation, multi-model ML pipelines, and containerized full-stack deployments in Next.js, FastAPI, PyTorch, and Docker.

TECHNICAL SKILLS

Languages	Python, Java, JavaScript, TypeScript, SQL
Frontend	Next.js 15, React.js, Tailwind CSS, HTML5, CSS3
Backend	Node.js, Express.js, FastAPI, Flask, REST APIs
AI / ML	PyTorch, scikit-learn, XGBoost, OpenAI API, Tesseract.js, NLP, Transfer Learning
Databases	PostgreSQL (Prisma ORM), MongoDB, SQLite
DevOps & Tools	Docker, Docker Compose, Git, GitHub, Postman, AWS Cloud Foundations
Core Concepts	ML Model Deployment, Microservices Architecture, JWT Auth, API Design, DSA, OOP

EXPERIENCE

Associate, LLM Post-Training

Jul 2026 – Present

Ethara AI — Gurugram, Haryana

- Promoted from LLM Post-Training Intern to Associate, taking on expanded ownership of post-training evaluation workflows for Large Language Models.
- Author Product Requirement Documents (PRDs), evaluation rubrics, technical specifications, and structured guidelines for enterprise software applications.
- Collaborate on workflow analysis, testing, and QA activities to improve AI system performance and output consistency across evaluation pipelines.
- Drive documentation, requirement analysis, and operational process optimization in a fast-paced AI development environment.

LLM Post-Training Intern

Feb 2026 – Jun 2026

Ethara AI — Gurugram, Haryana

- Contributed to post-training workflows for Large Language Models through evaluation, validation, and quality improvement processes.
- Authored Product Requirement Documents (PRDs), evaluation rubrics, technical specifications, and structured guidelines for enterprise software applications.
- Collaborated on workflow analysis, testing, and QA activities to improve AI system performance and output consistency across evaluation pipelines.

EDUCATION

Guru Tegh Bahadur Institute of Technology

2026 (graduated)

B.Tech in Artificial Intelligence and Data Science

CGPA: 8.63/10

PROJECTS

AgroAI – Intelligent Agricultural Platform

Next.js 15, FastAPI, PyTorch, XGBoost, PostgreSQL, Docker

- Engineered a full-stack AI farming platform with 4 independent ML services: crop recommendation (Random Forest, 99.5% accuracy), plant disease detection (MobileNetV2 CNN via PyTorch, 98.2% accuracy across 15+ disease classes), fertilizer prediction (Decision Tree, 97.8% accuracy), and yield forecasting (XGBoost).
- Trained models on 154,000+ agricultural data points including the PlantVillage dataset (54,000+ leaf images) and a fertilizer dataset (99,000+ samples), supporting predictions across 22 crop types.
- Containerized the full 3-service microservices architecture (Next.js + Express + FastAPI) using Docker Compose with Nginx reverse proxy; secured with JWT, bcrypt, and rate limiting (100 req/15 min per IP) to support concurrent multi-user sessions reliably.

AI StudY Bot – GPT-Powered Learning Platform

Next.js 14, Node.js, OpenAI API, TypeScript, MongoDB

- Built an OpenAI GPT-integrated study platform with intelligent document analysis of uploaded PDFs, auto-generated quizzes across multiple difficulty levels, and on-demand summaries, enabling students to process study material significantly faster than manual review.
- Designed a full-stack architecture (Next.js + Express + Multer file uploads) with JWT-secured APIs and Zustand state management, supporting concurrent multi-user sessions with isolated study histories per user.
- Implemented an AI-driven study scheduler with adaptive goal-tracking algorithms and a performance analytics dashboard surfacing learning patterns, quiz scores, and progress trends.

AI Money Management – OCR Expense Tracker

Next.js 15, Python, scikit-learn, Tesseract.js, MongoDB

- Developed an AI-powered expense tracker with client-side OCR (Tesseract.js) that auto-extracts transaction amounts, dates, and merchant names from receipt images with confidence scoring, eliminating manual data entry for authenticated users.
- Trained a custom budget prediction ML model (scikit-learn, serialized as .pkl) served via a dedicated Python API, providing AI-driven spend forecasts and personalized budget recommendations per user account.
- Integrated JWT + bcrypt authentication, MongoDB persistence, and full Indian currency format support (Rs./INR), handling end-to-end encrypted financial data flow for multi-user accounts.

Web-Chat – Real-Time Messaging Application

React, Vite, Socket.IO, Node.js, Express, MongoDB, Cloudinary

- Built a MERN-stack chat application with WebSocket-powered instant messaging, online presence indicators, and real-time image sharing via Cloudinary storage.
- Shipped secure JWT authentication, profile management, and 30+ switchable interface themes (Tailwind CSS + DaisyUI) across a fully responsive desktop and mobile layout.

Tic Tac Toe Ultimate – Desktop Game with Minimax AI

Java, Swing, jlink/jpackage

- Implemented an unbeatable AI opponent using the minimax algorithm with alpha-beta pruning, strategic opening heuristics, and endgame optimization for faster wins.
- Packaged the Swing application as native installers for Windows (.exe), macOS (.dmg), and Linux (.deb) with jlink and jpackage, separating UI, game logic, and AI into independent classes.

Personal Portfolio

Next.js 15, React 19, TypeScript, Tailwind CSS, Framer Motion

- Designed and built a responsive portfolio site with Framer Motion transitions and a typed component architecture on the Next.js App Router.

ACHIEVEMENTS

- Smart India Hackathon Finalist — Selected as finalist in 2 consecutive national hackathons.
- AWS Cloud Foundations Certification — Verified credential in cloud architecture fundamentals.
