PROFESSIONAL SUMMARY

Artificial Intelligence and Data Science undergraduate (CGPA: 8.63/10) with hands-on experience building production-grade AI systems, multi-model ML pipelines, and full-stack web platforms. Currently working as an LLM Post-Training Intern at Ethara AI, contributing to evaluation workflows, PRDs, and enterprise AI specifications. Proficient in Next.js, FastAPI, PyTorch, Node.js, and Docker with a focus on containerized, scalable AI deployments.

EDUCATION

Guru Tegh Bahadur Institute of Technology

2026

B.Tech in Artificial Intelligence and Data Science

CGPA: 8.63/10

EXPERIENCE

LLM Post-Training Intern

Feb 2026 – Present

Ethara AI

Gurugram, Haryana

- Contribute to post-training workflows for Large Language Models through evaluation, validation, and quality improvement processes.
- Author Product Requirement Documents (PRDs), evaluation rubrics, technical specifications, and structured guidelines for enterprise software applications.
- Collaborate on workflow analysis, testing, and QA activities to improve AI system performance and output consistency across evaluation pipelines.
- Drive documentation, requirement analysis, and operational process optimization in a fast-paced AI development environment.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL

Frontend: Next.js 15, React.js, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express.js, FastAPI, Flask, REST APIs

AI / ML: PyTorch, scikit-learn, XGBoost, OpenAI API, Tesseract.js, NLP, Transfer Learning

Databases: PostgreSQL (Prisma ORM), MongoDB, SQLite

DevOps & Tools: Docker, Docker Compose, Git, GitHub, Postman, AWS Cloud Foundations

Core Concepts: ML Model Deployment, Microservices Architecture, JWT Auth, API Design, DSA, OOP

PROJECTS

AgroAI – Intelligent Agricultural Platform | *Next.js 15, FastAPI, PyTorch, XGBoost, PostgreSQL, Docker* 2025

- Engineered a full-stack AI farming platform with 4 independent ML services: crop recommendation (Random Forest, **99.5% accuracy**), plant disease detection (MobileNetV2 CNN via PyTorch, **98.2% accuracy** across 15+ disease classes), fertilizer prediction (Decision Tree, **97.8% accuracy**), and yield forecasting (XGBoost).
- Trained models on **154,000+ agricultural data points** including the PlantVillage dataset (54,000+ leaf images) and a fertilizer dataset (99,000+ samples), supporting predictions across **22 crop types**.
- Containerized the full 3-service microservices architecture (Next.js + Express + FastAPI) using Docker Compose with Nginx reverse proxy; secured with JWT, bcrypt, and rate limiting (100 req/15 min per IP) to support concurrent multi-user sessions reliably.
- Shipped end-to-end multi-language support across **6 Indian regional languages** (Hindi, Telugu, Tamil, Kannada, Malayalam) to improve accessibility for rural farming communities.

AI StudY Bot – GPT-Powered Learning Platform | *Next.js 14, Node.js, OpenAI API, TypeScript, MongoDB* 2025

- Built an OpenAI GPT-integrated study platform with intelligent document analysis of uploaded PDFs, auto-generated quizzes across multiple difficulty levels, and on-demand summaries, enabling students to process study material **significantly faster** than manual review.
- Designed a full-stack architecture (Next.js + Express + Multer file uploads) with JWT-secured APIs and Zustand state management, supporting **concurrent multi-user sessions** with isolated study histories per user.

- Implemented an AI-driven study scheduler with adaptive goal-tracking algorithms and a performance analytics dashboard surfacing learning patterns, quiz scores, and progress trends.
- Delivered a fully responsive mobile-first UI with dark/light theme support, optimized for both desktop and mobile learners with zero layout degradation across breakpoints.

AI Money Management – OCR Expense Tracker | *Next.js 15, Python, scikit-learn, Tesseract.js, MongoDB* 2025

- Developed an AI-powered expense tracker with client-side OCR (Tesseract.js) that auto-extracts transaction amounts, dates, and merchant names from receipt images with **confidence scoring**, eliminating manual data entry for authenticated users.
- Trained a custom budget prediction ML model (scikit-learn, serialized as `.pkl`) served via a dedicated Python API, providing AI-driven spend forecasts and personalized budget recommendations per user account.
- Rendered **3D analytics dashboards** with real-time category breakdowns, monthly trend analysis, and spending pattern insights, giving users actionable financial visibility across all tracked transactions.
- Integrated JWT + bcrypt authentication, MongoDB persistence, and full Indian currency format support (Rs./INR), handling end-to-end encrypted financial data flow for multi-user accounts.

ACHIEVEMENTS

Smart India Hackathon Finalist – Selected as finalist in 2 consecutive national hackathons.

AWS Cloud Foundations Certification – Verified credential in cloud architecture fundamentals.

LLM Post-Training Intern, Ethara AI – Driving enterprise AI evaluation workflows and specification design.
